**DISPOSABLE FACE MASKS
OF RUSSIAN MANUFACTURE**

2020

DISPOSABLE FACE MASKS OF RUSSIAN MANUFACTURE

Disposable application

Synthetic non-woven fabrics used in production are specially designed for healthcare products.

Output rate

The total production capacity of mask manufacturers in the Russian Federation is up to 10 mio. masks a day.

Quality

Hypoallergenic materials with high air permeability which do not irritate facial skin are used in products. All product models are tested in laboratories.

Delivery

Products are exported from international Russian airports, which ensures the shortest time of delivery.

Meltblown

All masks of Russian manufacture contain filtering material with the fiber spacing smaller than the size of most viruses and bacteria, including coronavirus.

Packaging

Manufacturers offer various consumer packages which differ, among other things, in colors, materials and number of units.

Sterility

Masks may be additionally sterilized to be used by healthcare providers.

Color

Various color choices are available for the products – both single-color masks and masks with custom design (printing).

A line drawing of a person's face wearing a grey surgical-style face mask. The mask has a white nose clip at the top and two teal elastic ear loops. A dashed teal line outlines a rectangular area on the front of the mask, which is highlighted with a light blue shaded area. Three callout lines with small white circles at the end point to the nose clip, the filter area, and one of the ear loops. The background consists of light grey wavy lines.

Nose clips

made from durable, flexible materials for tight fit

Filter layer

filtration level up to 99 %

Elastic ear loops

Made from elastic and soft material for additional comfort
